Gudivada, Andhra Pradesh, India. 521301, Clearance: Highly Relocatable

OBJECTIVE

Highly motivated and dedicated backend professional with one and half year of experience in developing backend applications. Possessing a solid foundation in python programming, django Framework. I am committed to build scalable and efficient web applications. Eager to utilize strong programming skills and passion for creating efficient web applications to contribute to the success of the team, seeking full time roles in web development.

EDUCATION

Lovely Professional University , Jalandhar, Punjab

2019 - 2023

B.Tech in Computer Science, GPA 7.81

-Successfully completed Bachelor's degree in Computer Science Engineering with outstanding academic achievement, consistently demonstrating excellence in coursework and examinations. Maintained a high level of dedication and commitment to academic pursuits, showcasing strong understanding and application of core computer science principles and practices.

SKILLS

Technical Skills - Python, Django, Django Rest Framework, HTML, Javascript, SQL
Cloud - EC2, Nginx, S3
Operating Systems - Ubuntu, Windows
Tools - VSCode, Postman, PgAdmin, ngrok, Git
Other Technical Skills - Multi Threading, Celery, Redis, websockets, django channels, web scrapping, boto3, custom middlewares, custom permissions, RabbitMQ, Caching.

EXPERIENCE

Python Developer

Aug 2023 - Present

Apptunix Technologies

Mohali, Punjab

- Developed robust web applications using Django Rest Framework which includes E-commerce websites, Healthcare, Dating apps, Educational platforms, social media apps, Chatbot development and booking apps.
- Collaborated with cross-functional teams to deliver projects on time. Collaborated with a team of 5 developers in an Agile environment to deliver features on time, participating in daily stand-ups and sprint planning. Used Django ORM to interact with the database, resulting in cleaner and more maintainable code.
- Deployed and managed applications on AWS, using services like EC2, S3, and RDS to ensure scalability and availability.

Python Intern

Feb 2023 – July 2023

Apptunix Technologies

Mohali, Punjab

- Contributed to the development and maintenance of web applications using Python and Django, enhancing the overall functionality and performance. Worked closely with senior developers to debug and optimize existing code.

- Participated in Agile development processes, including daily stand-ups, sprint planning, and code reviews, contributing to the timely delivery of project milestones.

PROJECTS

Artist Booking Platform

Role: Backend developer

Apptunix Technologies

May 2024 – June 2024

Technologies and Modules: Django rest framework, JWT, Django ORM, Django channels, Redis, PostgreSQL, Twilio, pyfcm, stripe, EC2, S3, multi threading, custom middlewares

- Designed and developed a comprehensive web application using Django Rest Framework, enabling clients to book artists based on their requirements, profiles and offer payments for booking.
- Implemented secure user authentication using JWT and profile management, enhancing user trust and platform security.
- Created advanced search and filter functionality using Django ORM, improving user experience and ease of finding artists based on their preferences. Implemented chat functionality using django channels(AsyncWebsocketConsumer) and Redis for comfortable bargaining regarding booking price.
- Built a notification system for booking requests, confirmations, and updates via email and SMS(using Twilio) and push notifications(pyfcm) enhancing communication between users. Implemented concepts like multi threading for parallel functioning of tasks.
- Successfully deployed in AWS EC2 ensuring a reliable and scalable platform.

Chatbot Development

Role: Backend developer

Apptunix Technologies

July 2023 – Sep 2023

Technologies and Modules: Django rest framework, openai, Celery, Django channels, JWT, Django ORM, PostgreSQL, S3, pyfcm, multi threading, Redis, custom middlewares

- Developed an intelligent chatbot system using Django Channels for real-time communication, designed to handle user queries through a decision tree model. The chatbot escalates queries to a human agent based on availability when further assistance is required.
- Utilized WebSocket for maintaining real-time communication between users and the chatbot, providing a seamless user experience.

Whizzo App

Role: Backend developer

Apptunix Technologies

April 2024 – June 2024

Technologies and Modules: Django rest framework, GeminiAi, langchain_google_genai, PostgreSQL ChatGoogleGenerativeAI, JWT, Django ORM, multi threading, s3, PdfReader, pdfkit, pytesseract.

- Developed a comprehensive application utilizing Gemini AI by giving prompts to automate the generation of articles, file summaries, notes, and flash cards. This project aimed to enhance productivity by providing users with automated content creation and efficient summarization tools.
- Developed tools to convert files between various formats (e.g., PDF to PPT, DOCX to PDF), enhancing the flexibility and usability of documents.

GotPrep(Healthcare Booking and Prescription Management System)

Role: Backend developer

Apptunix Technologies

Dec 2023 – Feb 2024

Technologies and Modules: Django rest framework, django channels, Redis, Twilio, pyfcm, Django ORM, agora(video call), Stripe, nginx, gunicorn, PostgreSQL

- Developed an integrated healthcare platform that allows patients to book doctors based on time slots, facilitates consultations, and enables in-app medicine purchases according to doctor prescriptions. Merchants can add and manage their medicine stock within the app.
- Developed a consultation module where doctors can provide medical advice, recommend treatments, and prescribe medicines within the platform. Implemented agora for seamless video call between doctor and patient. Created a system for merchants to add, update, and manage their medicine inventory, ensuring up-to-date stock information for patients.
- Integrated secure payment gateways (e.g., Stripe, PayPal) to facilitate smooth financial transactions within the app.
- Successfully deployed in AWS EC2 using nginx, gunicorn.

Majra(Learning Platform)

Role: Backend developer

Apptunix Technologies

Mar 2024 – June 2024

Technologies and Modules: Django rest framework, multi threading, nginx, EC2, PostgreSQL

- Developed an online course management system where administrators can upload courses with videos categorized by subjects. Users can view and register for courses, complete them, attempt quizzes, and receive certificates upon completion.
- Created a quiz module where users can attempt quizzes related to the course content to test their understanding. Developed a system to automatically generate and issue certificates to users upon successful completion of courses and quizzes. Designed and managed databases using PostgreSQL to store user data, course materials, and quiz results.

Edwin Dating App

Role: Backend developer

Apptunix Technologies

Feb 2024 – April 2024

Technologies and Modules: Django rest framework, multi threading, PostgreSQL, Django channels, Redis

- Developed a matchmaking application that allows users to find potential matches based on preferences and chat with them. The application facilitates secure user registration, profile management, and real-time messaging.
- Developed a real-time chat feature using Django Channels and WebSockets, ensuring instant messaging between users.

Professional Summary

Aspiring to become full-stack developer with a background in backend development using Django. Enthusiastic about expanding skill set to encompass frontend technologies like React and JavaScript. Dedicated to acquiring the knowledge and experience necessary to become proficient in full-stack development and deliver impactful web applications.
